Dear Hiring Manager,

Please accept my application for the Full Stack Developer at the One Exchange Corp., I am a software engineer graduated from the University of Alberta specialization in Computer Science and will be available to work upon request.

I am experienced with web application development, including front-end technologies like Node.js, React, back-end technologies like Python Django, JavaScript Express, databases like SQLite3, MySQL, PostgreSQL, MongoDB, and continuous integration tools like Travis CI. Here (<https://sponge-book.herokuapp.com/>) is a link to one of the web apps I developed using Python Django and JS React, which is a networking app like Facebook, testing and deployment phases are configured to be done automatically on cloud servers for every commit in the project. I always embrace new technologies and I have passions in leaning tools like Kubernetes, Jenkins and AngularJS.

I have years of experience with software development on various platforms along with proficient knowledge of MVC Framework, Git source control and Object-Oriented Programming. In my third year of undergraduate, I have also gained extensive experience with OOP, Agile development methods and software design from working as a software developer for the University of Alberta. Meantime, I have honed my problem-solving, interpersonal and communication skills through various team projects. I have also developed interests in Machine Learning, Computer Vision and Robotics programming with hands-on projects during my undergraduate. All these experiences make me adaptive to different work environments and software technology preferences.

Please do not hesitate to reach out if you have any questions, and I would love to hear from you soon to discuss my qualification in detail. Thank you for your consideration.

Sincerely yours,

Zhonghao Lu
